

The very origin of L.C.A. DOMIKI Ltd bears evidence to a dynamic organisation. In 2000, N.P. Lanitis Ltd, JSC Ecodomiki Ltd and Evangelos Aristophanous Ltd, three powerful companies with long histories in the steel trading industry, joined forces to create a new common vision of growth and progress.

Today, DOMIKI is an ambitious, dynamic and constantly developing company in the steel trading industry in Cyprus serving thousands of customers and consistently delivering unparalleled quality, excellent support and efficient service.

-

DOMIKI can offer its customers a complete package of products and services of superior quality and respond to the full range of requirements in the industry for concrete reinforcing products.

The three main categories of products include steel reinforcing bars, wire mesh and cut and bend products.

With regards to steel for concrete reinforcement, the company sources only top quality steel which is in conformity with the strictest of international specifications, including the new requirements for earthquake-resistant constructions.

The company's wide range of wire mesh products are marketed under the brand name DOMIKINET, and produced at DOMIKI's own contemporary industrial facilities in Lemesos.

Finally, in line with the company's strategy of offering a complete range of products and services to customers, a steel processing centre was created for cutting and bending steel reinforcement to suit any customer construction designs.

Using state-of-the-art machinery and under the supervision of experienced staff, the company ensures a complete and accurate application of strict international specifications.

DOMIKI enjoys the continuous respect of its customers and the thousands of projects completed in Cyprus using its products (domestic and commercial), certify this extensive recognition. The company's investments in technology and the professional organisation of its operations guarantee that it can satisfy the ever increasing needs of its customers and exceed their highest expectations.
